Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-55, which are drawn to a frequency divisional multiple access system wherein sub-carriers of the system are all amplified (classified in class 370, subclass 344).
 - II. Claims 56-62, which are drawn to calculating subcarrier group delays and common signal path delays, along with generating cyclic prefixes (classified in class 370, subclass 519).

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the inventions are different because one performs amplification of sub carriers (Group I) and the other calculates signal delays (Group II), therefore each invention is performs different and unrelated functions.
3. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is also proper.
